Precision = P(correct | accepted); success rate = P(accepted). Confidence threshold = 0.90 for global K2-K3 and 0.95 for intermediate/specialized K0-K1/K4-K6. Statistics use h24 runs 1, 3, 5, 7, and 9 (9,546 samples). SUV and COUPE statistics use in-domain samples. Execution time is the measured mean for K0-K6; Kdet is the perfect 10,000 ms paper-mode fallback.
